Envision the Susquehanna

Spanning more than 726 miles from its headwaters to Chesapeake Bay, the Susquehanna River is the largest tributary to the Chesapeake Bay. Its journey through the mountains, valleys, and rivers of Pennsylvania, Maryland, and Virginia is a testament to the region's natural beauty and diversity.

The Susquehanna flows through a variety of landscapes, from the rolling hills of central Pennsylvania to the fertile plains of Maryland. Its course is marked by numerous water gaps and valleys, including the famous Horseshoe Curve in Pennsylvania and the Susquehanna River Valley in Maryland.

The river is home to a diverse range of wildlife, including fish species such as smallmouth bass and muskellunge. The river also supports a variety of bird species, including wood ducks, mallards, and bald eagles.

The Susquehanna is a vital source of water for millions of people in the region. Its natural resources are an important part of the local economy, providing employment opportunities in fishing, tourism, and water-related industries.

The Susquehanna River Birding and Nature Center is located in Havre de Grace, Maryland, near the mouth of the river. The center offers birding tours, nature walks, and educational programs to help visitors learn about the river's wildlife and natural history.

Today, the Susquehanna is facing a number of challenges, including pollution and habitat loss. However, the efforts of organizations such as the Chesapeake Conservancy continue to work towards protecting and preserving this valuable resource for future generations.
